Mark Dennis Concha

Curriculum Vitae · Aspiring SOC Analyst (Tier 1)

Taguig City, Metro Manila, PH markdennisconcha14@gmail.com
linkedin.com/in/mark-dennis-concha-2ab10a316 github.com/deeihen markdennisconcha.vercel.app

PROFILE

Computer science student at Taguig City University, training for the security operations centre: the room where analysts watch the alert queue, read logs and decide in minutes whether something is an attack. I hold my first certifications from Cisco and IBM SkillsBuild, study how attackers move so I can recognise their footprints, and take part in CTF events. I also build software with my team, most recently the backend of RescueLink Taguig, an emergency platform now in production for the Command Center of Taguig.

EDUCATION

Bachelor of Science in Computer Science 2023 – 2027 (expected)
Taguig City University, Taguig City

Senior High School, STEM-PTECH strand 2021 – 2023
Taguig City University, Taguig City

CERTIFICATIONS

Introduction to Cybersecurity Aug 2026
Cisco

Cybersecurity Fundamentals Aug 2026
IBM SkillsBuild

Working in a Digital World: Professional Skills Aug 2026
IBM SkillsBuild

PROJECTS

RescueLink Taguig · Backend Developer, Documentation 2026
Team of 4, built with the Command Center of Taguig · rescuelinktaguig.com

- Emergency response platform in production for the Command Center of Taguig. Residents request help through live voice, video or chat from any browser.
- Coordinators triage each request, log the incident, pinpoint its location and coordinate Police, Fire, Medical and DRRMO from one real-time workspace.
- Worked on the backend and wrote the project documentation; took part in on-site requirements gathering and system demos with the Command Center.

Next.js · React · TypeScript · NestJS · Socket.IO · PostgreSQL · Prisma · Docker · AWS

Booklat · AppBuildersPH Hackathon 2026: Local AI 2026
Team of 3

- Offline oral-reading assessment for Filipino teachers. On-device speech recognition suggests word-level reading marks in English and Filipino, and learner audio never leaves the device.
- Selected as a wildcard to pitch to the judges.

Local AI · on-device speech recognition

.Js · Free JavaScript Course 2026
Solo build · dotjsv2.vercel.app · github.com/deeihen/dotjs

- JavaScript from "Hello, World!" for complete beginners: 21 short lessons that run and check code in the browser.
- No account and no install; progress is saved in local storage on the learner's own device.

Next.js · React · Three.js · GSAP

SOC SKILLS

Log analysis	Splunk searches over auth logs, e.g. sources with repeated failures followed by a successful login.
Threat detection	Writing Sigma rules mapped to MITRE ATT&CK, such as new members of local Administrators (T1136).
Incident response	NIST SP 800-61 playbooks: confirm, contain, scope, eradicate, recover, report.
Network traffic	Following conversations in Wireshark and tshark to see what left the network and where it went.
Endpoint monitoring	Sysmon and Wazuh process events, such as Office spawning encoded PowerShell.
Vulnerability scanning	Nmap and OpenVAS scans, then ranking exposed services by what to close first.

CTF SKILLS

Web exploitation	SQL injection, broken authentication and exposed endpoints, using Burp Suite.
Forensics	Carving hidden data from files, images and packet captures (binwalk, exiftool, Wireshark).
Cryptography	Recognising encodings and classic ciphers and peeling layers with CyberChef and Python.
OSINT and recon	Service enumeration with Nmap and finding what is already public about a target.

TECHNICAL STACK

Security tools	Burp Suite, Nmap, Wireshark, CyberChef
Operating systems	Kali Linux, Parrot OS, Arch Linux
Languages and data	Python, Java, C#, MySQL
Web	React, Next.js
AI tools	Claude Code, Codex, Antigravity, Devin
